

Static Hot Boxes

Store bulk quantities of hot asphalt with a **Proteus Static Hot Box**, for purchase or hire

A Static Hot Box is a great way to cut costs and increase productivity. Sending multiple gangs to and from the asphalt plant each morning costs untold time and money. With a Static Hot Box, you can get bulk loads of material delivered to your yard, then load it out from there into smaller vehicles or mobile Hot Boxes. No travel time, no queuing time, just lots more time getting on with the job at hand!

Proteus offers Static Hot Boxes in a choice of fuel options: the GS range runs on propane gas; the DS Boxes can run on either kerosene or diesel; and the ES Boxes are electrically heated. They are all available in capacities of 12, 16, 20 and 30 tonnes, and we can even build custom size units if you have any special requirements.

All our Boxes will keep your asphalt hot and up to spec for 2-3 days, and are available with remote control operation of the lids and door for added convenience and increased safety. They can be bought outright or hired for periods as short as 6 weeks with inclusive maintenance, with discounted rates for long-term rental.

'GS' range - propane

The GS range of Static Hot Boxes utilise our clean-burning propane gas heating system. This setup provides an even, gentle heat across the Box floor, and is ideal for preventing hot and cold spots. If purchasing, the low servicing costs will be particularly attractive.

'DS' range - diesel or kerosene

Our DS spec Hot Boxes can be run on either diesel or kerosene, and incorporate an integral fuel tank. The DS Boxes may be attractive to those who want a fuel system that is more portable and accessible than bulk propane gas, although maintenance costs are slightly higher than the GS range.

'ES' range - electric

ES spec Hot Boxes require a beefy 40 amp, 3-phase electrical supply to power the heating elements and compressor, and so are not suitable for all sites. They will be particularly attractive to clients who either have very cheap electricity, or do not pay for it directly at all.
